PAPER & MAGNET THICKNESS

Paper and magnet thickness may have up to .001 differential.

OUTDOOR MAGNET INSTRUCTIONS

Preparing Magnetic-Receptive Surfaces:

- Before affixing magnetic sheet to a metal surface, be sure all surface paints, clear coats and waxes are cured (hardened).
- Clean the metallic surface and the magnet with mild detergent, wipe with soft cloth.

Applying Flexible Magnet:

- Affix to smooth, flat or gently curved metallic surfaces.
- Make sure the entire magnet is flat against the metal surface (i.e., no air pockets).
- If you place the magnet in the wrong position, completely remove the magnet from the surface and re affix. Do not pull the magnet across the surface, or it may stretch due to the resistance caused by the high magnetic strength.
- Avoid use on horizontal metal surfaces exposed to direct sunlight (such as automobile hoods) or temperatures exceeding 150°F (66°C).
- Be aware that long-term use on surfaces frequently exposed to sunlight (such as vehicles) can result in uneven fading of the surface because the magnet-covered area is shielded from ultraviolet rays.

Cleaning Flexible Magnet:

- To guard against moisture and dirt buildup between the magnet and the metal surface (particularly on outdoor applications), remove the magnet at regular intervals. Clean both the magnet and metal surface with mild detergent; wipe with a soft cloth or allow to air-dry. (For vehicle mounted signs, remove and clean WEEKLY.)
- To protect fresh clear coat, base coat and/or vinyl surfaces on new cars and trucks, remove magnetic signs DAILY.

COMPUTER GENERATED ART

Available applications:

Adobe Photoshop CC*
Adobe Illustrator CC
InDesign CC
Adobe Acrobat

Preferred art is **Vector** based saved as EPS format. Art should be modeled in the desired spot colors unless product is to be printed in four-color process.

*Color **Photoshop** files must be saved in CMYK mode. Black and white photographs should be saved in GRAYSCALE mode. Resolution should be 300 dpi at 100% of printing size and saved as EPS, TIFF, PSD or JPEG format. Black and white line art should be saved in BITMAP mode at no less than 600 dpi resolution at 100% of print size and saved as EPS. All photos and links must accompany the files they are used in, no embedded photos please.

PLEASE NOTE:

DO NOT send in Corel Draw (.cdr), Word (.doc), Excel (.xlsx) or Publisher (.pub) files for artwork. These types of files are either non-acceptable artwork formats or they are unreliable when converting to Adobe graphics software and could produce undesirable effects which could delay the production of your order. Please save or export art as Press-Quality PDF. If you submit art as a TIFF or JPEG, please remove the die, margin and guide lines before rasterizing the image. 300 dpi is the minimum recommendation.

TEXT

All fonts must be included with all documents. If generated on a PC platform, all text **MUST** be converted to paths.

ART CHARGES

There will be no art charge if acceptable computer generated art is provided. Preparation of artwork that is not computer generated to our specifications will be subject to a charge of \$50.00(z) per hour. Minimum charge is 1 hour.

TEMPLATES

Templates for most products will be available at www.lioncircle.com. Please contact Lion Circle for templates.

DIGITAL PRINTING

All digital products are output in 4 color process (CMYK), great for photos and multi color artwork. Color Matching: PMS colors are interpreted from the CMYK process chart in the Pantone Process Color Imaging Guide. Due to the printing process there is a tolerance of ± 2.9 mm in the printing registration.

Borders are not available on digitally printed products.
